

Structurally Deficient Bridges on the National Highway System

California - Congressional District 35

Consult your state DOT for the most up-to-date status of bridges.

Note: The bridges displayed on this map represent the results of a combined BTF/FHWA effort to geocode bridges from FHWA's National Bridge Inventory (NBI). With the exception of Kentucky and Pennsylvania, whose most current data is 2004, all data is from the 2007 NBI. Of the 10,300 structurally deficient NHIS bridges in California, 5,462 could not be geocoded because of insufficient data. Structurally deficient bridges are not necessarily unsafe; all public road bridges receive regular safety inspections. The bridges listed were categorized as structurally deficient at the time the maps were developed.
