

GAMA Statement on ALERT Act

March 26, 2026

“GAMA commends the House Transportation and Infrastructure Committee for its commitment to respond to the tragic accident at the Ronald Reagan Washington National Airport in January 2025. We applaud Representatives Graves, Larsen, Nehls, Carson and all committee members for their support and leadership in working to address aviation and airspace safety issues and the recommendations made by the NTSB in its final report.

“GAMA values the ALERT Act’s emphasis on fostering technologies developed by aviation manufacturers to advance safety and operational improvements. We appreciate the inclusion of provisions to address possible FAA certification and supply chain issues to facilitate the ambitious implementation of mandated equipment in an effective and practical manner. GAMA will continue to work with both the House and the Senate to provide assistance on technology developments, certification and related issues to further progress these important aviation safety initiatives.”
